

## PROFESSIONAL SUMMARY

AI engineer who builds systems that act autonomously — not just generate text. Interned at Prodapt Solutions engineering LLM-powered automation for enterprise delivery workflows. Independently shipped five production-grade projects spanning autonomous browser agents, multi-agent NOC pipelines, SDLC automation, and computer vision safety systems. Writes clean Python, thinks in graphs and agents, and has solved 200+ LeetCode and 404 CodeChef problems to back it up.

## TECHNICAL SKILLS

**AI / ML:** LLMs · Agentic AI · RAG Pipelines · Fine-tuning · NLP · Computer Vision · YOLOv11

**Frameworks:** LangChain · LangGraph · Flask · React · Node.js

**Languages:** Python · JavaScript · TypeScript · SQL

**Tools:** Git · MongoDB · FAISS · ChromaDB · Jupyter · VS Code

## EXPERIENCE

**AI Developer Intern** · Prodapt Solutions Pvt Ltd, Chennai

Feb 2026 – May 2026

- Designed and deployed tool-calling LLM agents that automated repetitive steps in enterprise delivery workflows, reducing manual handoffs across internal reporting pipelines.
- Prototyped structured report generation and document summarization features using generative AI; outputs were adopted into internal tooling used by delivery teams.

**Generative AI & Full Stack Trainee** · Warriors Way Hub

Aug 2024 – Nov 2024

- Wired Gemini and OpenAI APIs into production Flask applications, building MongoDB backends that managed conversation state, prompt versioning, and user session persistence.
- Owned full delivery of AI features from prompt design to frontend integration, shipping end-to-end across multiple sprint cycles with no hand-off gaps.

**AI & Data Analytics Intern** · NOVITECH R&D

Mar 2024 – Jul 2024

- Built Random Forest and Logistic Regression classifiers; automated Python data pipelines reducing manual effort by ~40%.

## PROJECTS

**Aether – Autonomous Web Browser Agent**

Python · LangChain · Playwright · Agentic AI

- Built an agent that navigated live websites, clicked interactive elements, and extracted structured data through multi-step planning — zero hardcoded selectors or scraping rules.

**NOC System using GenAI & Agentic AI**

Python · LangGraph · Gemini AI

- Orchestrated a LangGraph multi-agent pipeline where specialized agents detected anomalies, triaged severity, and auto-generated structured incident reports — mimicking a full NOC analyst workflow.

**AI-Augmented SDLC Platform**

Python · LangChain · React · Flask

- Embedded LLM agents at every SDLC phase — requirements parsing, test case generation, code review, and deployment summaries — cutting manual documentation effort across the dev lifecycle.

**GPT-2 Fine-Tuned Product Description Generator**

Python · HuggingFace · PyTorch

- Fine-tuned GPT-2 (124M params) on e-commerce dataset with fp16 + gradient checkpointing; trained on consumer GPU in under 3 hrs.

**MineGuard AI – Mine Safety Monitoring System**

Python · Flask · YOLOv11 · Ollama · Agentic AI

- Deployed a real-time safety platform that fused YOLOv11 structural crack detection, multi-sensor IoT streams (displacement, pore pressure, strain), and live weather data into a unified risk score — with an Ollama-powered chat assistant for on-demand incident guidance.

## EDUCATION & ACHIEVEMENTS

**B.Tech – AI & Data Science**

SRM TRP Engineering College | 2022 – 2026

CGPA: 8.09 / 10.0

**LeetCode:** 200+ problems — DSA (arrays, graphs, DP)

**CodeChef:** 404 problems · Silver Badge · 50-day Gold Streak

**GitHub:** 24+ public repos — agentic AI, LLM apps, full-stack
